

About Padakhep

Padakhep, a leading development organization in Bangladesh since 1986, with the legacy of 40 years of driving change, has a network of over 700 offices and a family of more than 11,000 employees. It has contributed to the transformation of the digital economy and served over 10 million beneficiaries through a holistic development approach: CAPACITY enhancement, financial CHOICES and market CONNECT. For more details, visit www.padakhep.org

Product Manager

No. of Vacancies : 01
Employment Type : Full Time
Job Location : Onsite
Experience : 3–5 Years

Role Summary

We're hiring Product Manager who can own product delivery end-to-end and prototype/build software using AI-assisted development + no-code/low-code tools. You'll work closely with engineering and business stakeholders to ship high-impact FinTech workflows faster using LLMs (ChatGPT), Cursor, Lovable, and related automation platforms.

Key Responsibilities

- Own the product lifecycle: discovery → PRD/user stories → backlog → sprints → release → iteration
- Build core FinTech workflows
- Translate operational needs into process flows, data requirements, edge cases, and acceptance criteria
- Use AI + no-code/low-code tools to accelerate delivery through:
 - Rapid prototyping (Figma screens, user flows, clickable prototypes)
 - No-code/low-code MVPs (simple internal apps, forms, workflows, admin panels)
 - Product documentation (PRDs, user stories, test cases)
 - Delivery support (API drafts, SQL queries, technical documentation)
- Define KPIs and track impact (e.g., TAT reduction, error reduction, collection efficiency, operational cost savings)
- Ensure strong foundations: role-based access, audit trail, data integrity, controls, compliance alignment
- Define, track, and analyze product metrics (e.g., adoption, activation, funnel conversion, retention, error rates, turnaround time) and turn insights into clear experiments and prioritized improvements.

Tools we use and how you'll use them

- We don't just "manage" products—we build, test, ship, and learn fast. Here's the tool stack you'll use to turn ideas into working FinTech workflows with real impact:
- ChatGPT/Claude/Gemini: Turn messy requirements into crisp PRDs, uncover edge cases, draft test scenarios, and sharpen stakeholder comms
- Cursor/Lovable (AI dev tools): Prototype faster, support implementation, and iterate quickly with AI-assisted development
- Retool/Appsmith/Power Apps/Bubble/Glide: Build MVPs and internal tools (admin panels, forms, workflow apps) without waiting months
- Zapier/Make/n8n: Automate handoffs, triggers, alerts, and integrations so operations run smoother
- Figma: Map flows, validate ideas early, and align scope with Design + Engineering through clickable prototypes
- Jira/ClickUp: keep delivery tight: clean backlog, clear acceptance criteria, sprint execution, and release readiness
- Notion/Confluence: keep everyone aligned with living docs: specs, decisions, release notes, and change logs
- Lyssna: Run rapid usability + preference tests to validate flows before we build the wrong thing
- Excel/Google Sheets + BI tools: Track KPIs, spot trends, measure impact, and turn insights into the next iteration

Nice to have: hands-on microfinance ops experience; building report builders/workflow engines/admin panels; comfort with APIs, databases, QA/UAT, and release management.

Education Requirements

- BSC in Computer Science & Engineering or equivalent.
- Relevant professional certifications will be considered an added advantage.

The last date for submission of application: 31 March 2026
